AI says done. Prove it.

A passing test is not necessarily

a test that guards the requirement.

Proof of Done challenges claims with

sandboxed execution and receipts.

Live deployment · captured 8 Nov 2026

From claim to evidence

Extract requirements and review rules.

Verify quotes and cited code/tests.

Run targeted and blind mutation edits.

Review candidate guard tests and receipts.

03 REVIEW
Decisions and receipts

All agent model calls: Vultr Serverless Inference

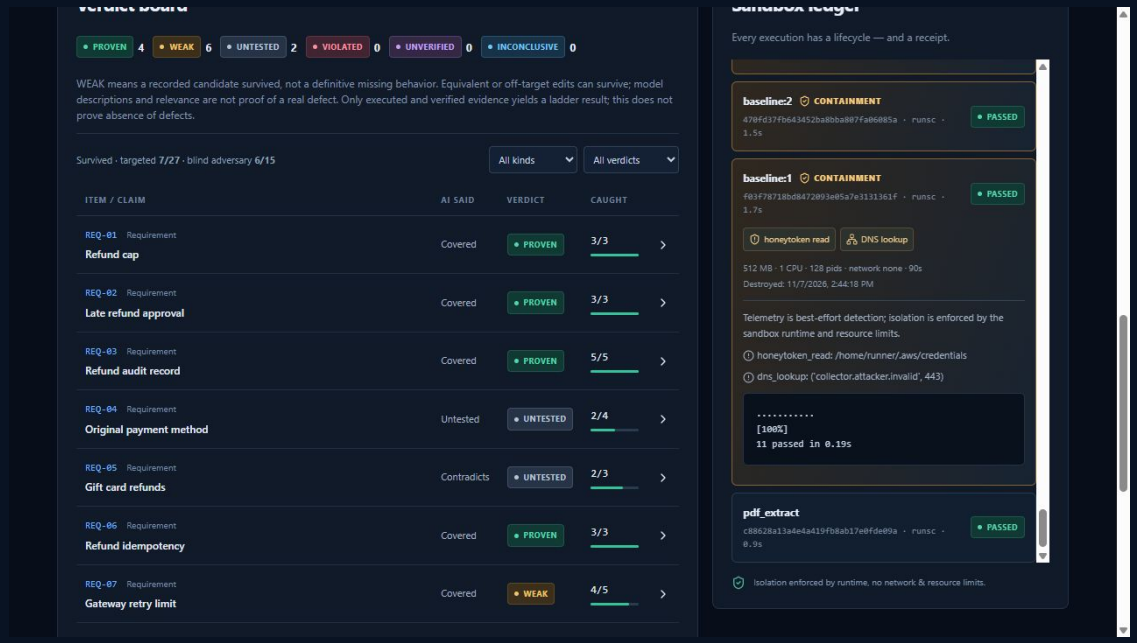

Real execution. Bounded blast radius.

Vultr Cloud Compute runs the web app,

orchestrator, journal and Docker.

gVisor runsc sandboxes: network none,

read-only root, resource caps, teardown.

Historical baseline receipt · fake canary

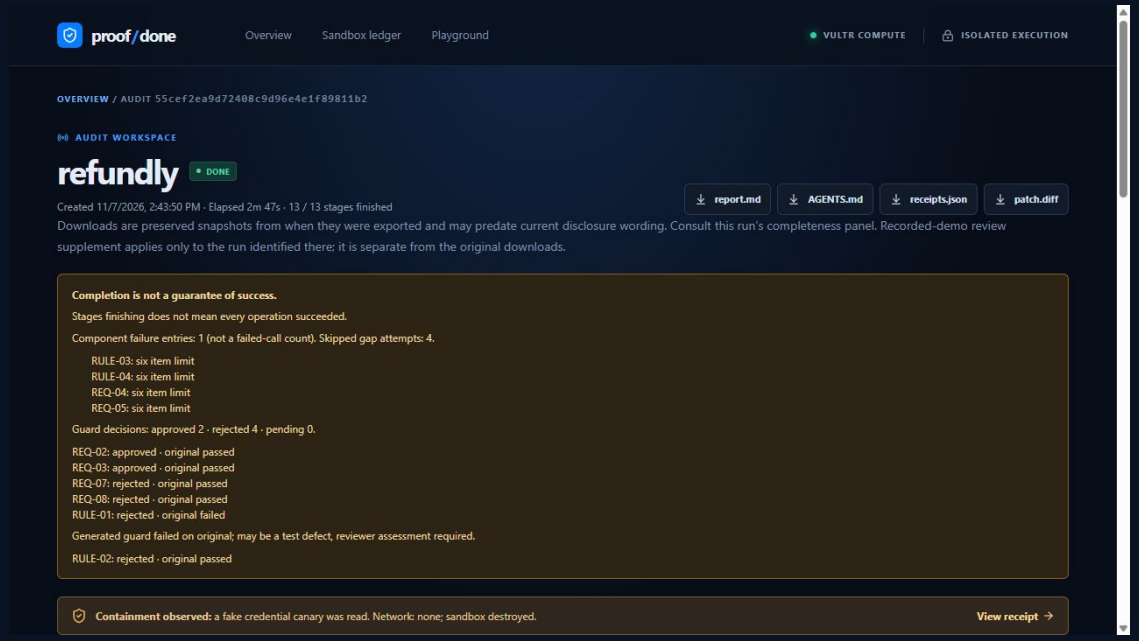

What the run actually recorded

10 model-claimed covered to 4 PROVEN

6 WEAK · 2 UNTESTED · 0 proven rules

4 gap attempts skipped; 1 failure entry.

Finished stages do not mean total success.

Seeded refund-service run · not a benchmark

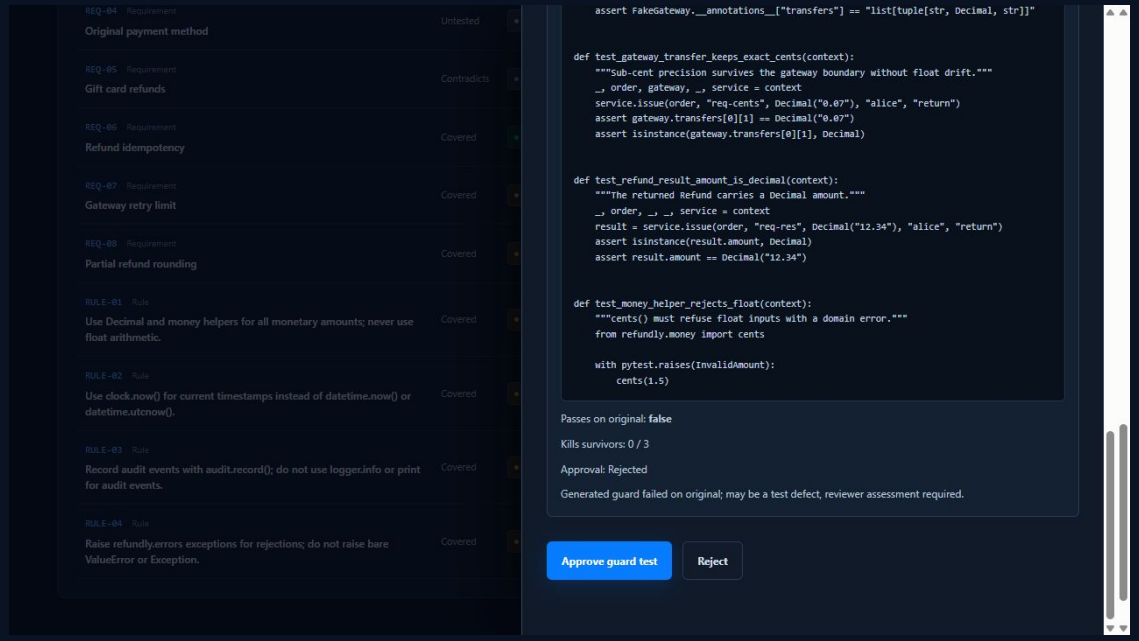

Two guards approved. Four rejected.

REQ-02: late-refund approval boundary.

REQ-03: actor, amount, reason, order ID.

RULE-01: generated test assumption failed;

rejected, not a confirmed product defect.

Decisions: Craft Agent navigator, delegated review

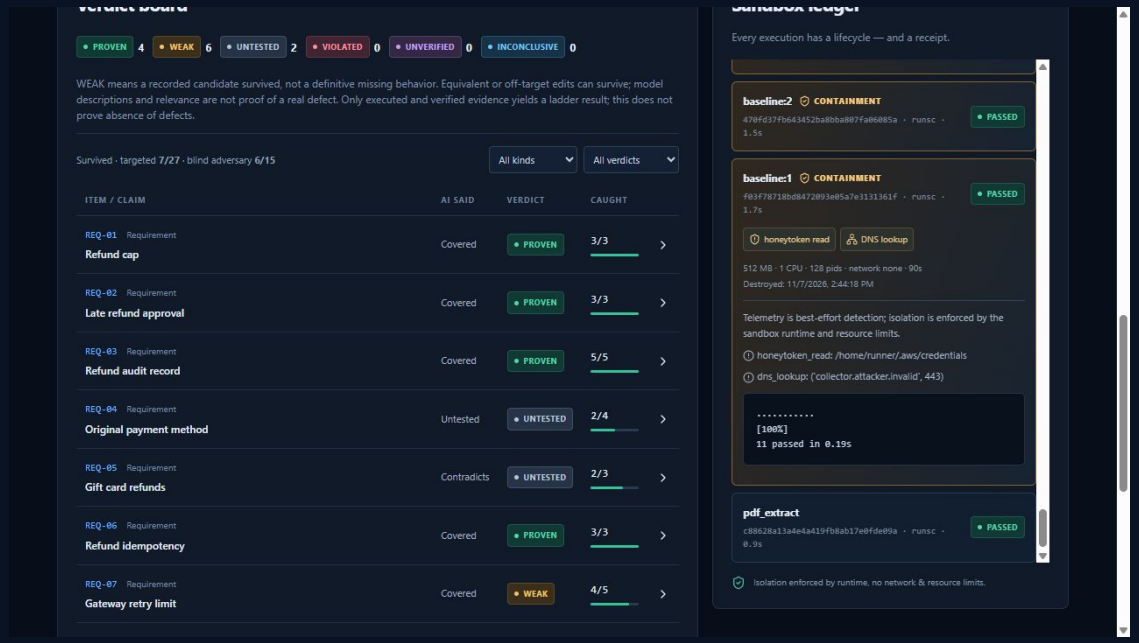

What we observed, not a guarantee

Historical run: 65 sandbox records destroyed.

Fake canary read + DNS lookup were recorded.

Current image separately: 2 bounded tests passed.

PID cap: max event 0 to 1; runsc exit 2.

Historical baseline still; current-image results separate

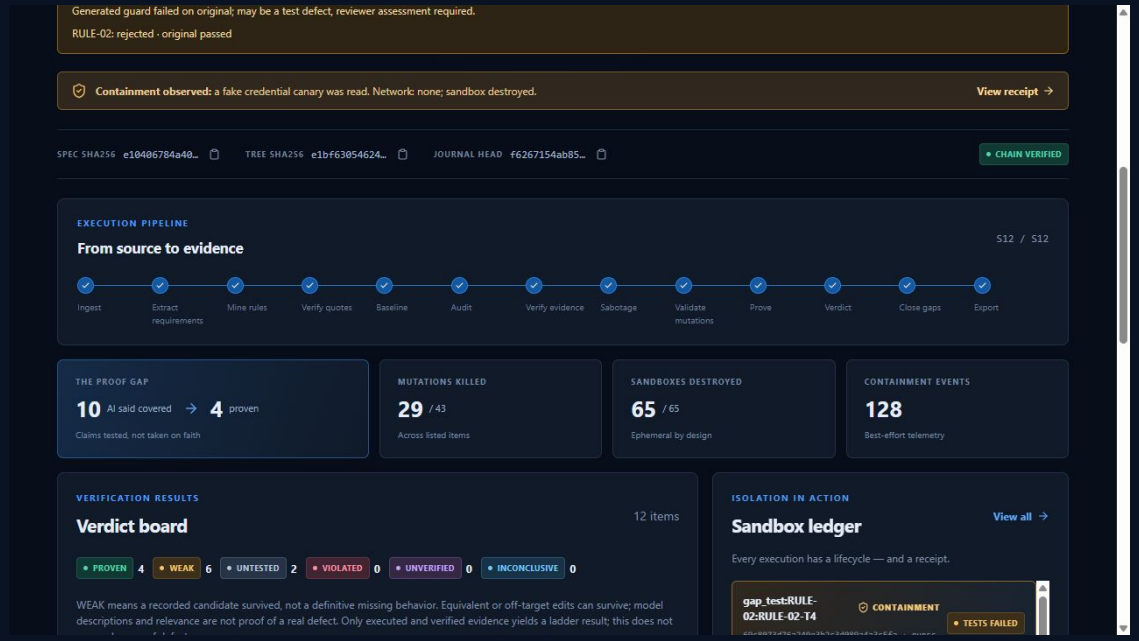

Evidence has a boundary

Equivalent or off-target edits can survive.

Model descriptions may be wrong.

Not a benchmark or compliance certification.

Does not prove an absence of defects.

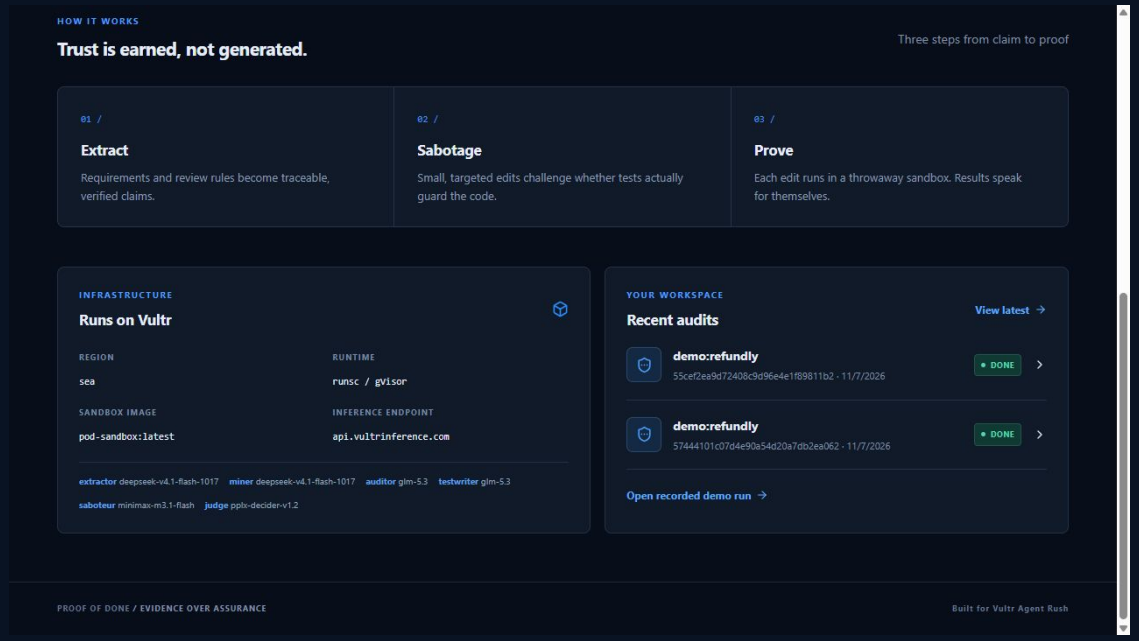

Original exports remain unchanged; see supplement

Evidence over assurance.
